## **О себе**

---

I graduated from the National Research Nuclear University MEPhI (Moscow Engineering Physics Institute). This is one of the leading universities in Russia, where high-level specialists are trained. I started my career as software testing engineer in successful international Russian company. Started as junior software testing engineer I became a head of testing group of product department.

Since my school days my hobby is photography and vintage film camera collecting. At some point this hobby prompted the idea of the future startup, which I began to implement with the group of close friends. Thereby my professional activity synthesized a testing and a photo in a single project. We decided to register our company in London, so I moved there and leaved the post of head of the test group. Thanks to the startup of my own project, I've got a huge professional, personal and worldview

experience. Working on a new web-product, starting from scratch and without the required serious resources, I've learned how to organize all processes, manage technologies, thinking about new opportunities and improvements, and most importantly to help employees in all areas, bearing responsibility to the team, users and partners.

As a technology expert I intended to a perfectly implement of the interactive platform that accumulates the most advanced developments in the field of IT and machine learning. As a photographer, aesthete and global citizen I worked with likeminded people to create a company that will help society to give users around the world an unique opportunity to share and purchase unique licensed high-quality photo content. We were eager to create the most fair system for all users, and the team continues to work productively on the improvement of this goal today. The project brought together a multinational team of experts whose strive to make this world a better place in addition to the main goal - the development of the platform. That's why the team today supporting the charity organization Alzheimer Disease International.
